

In the field of personal protective equipment (PPE), the work gloves offered by BCL help improve the health and safety check of users, while increasing their productivity.

OUR MISSION: "Help make organizations more productive by protecting and optimizing the use of hands for their workers."

Since 1964

Heat Resistant Glove Model 3ASP-4 Split leather

Designed for:

- ❖ Heavy work
- ❖ Foundry

As is the case for many of our products, this glove has been designed and manufactured at the request of a customer who uses the consulting services offered by BCL Glove Ltd. This glove is especially used in handling hot parts.

The split leather is a material that is highly resistant to abrasion, cuts, sparks and heat. Sewn with Kevlar® thread.

The leather pieces are thicker on the palms. The inside of the palm is cotton isolated.

Developed originally for a foundry, the glove is protected outside by the split leather.

It features an elastic wrist adjustment.

Its cuff of 11 cm (4 1/4") is made of split leather. It can also be designed in other materials, sizes and colors corresponding to the specific needs of our customers.

Maintenance:

The split leather of this glove absorbs water. By cons, this type of leather is highly resistant to abrasion. This is why it is used for hard work. For cleaning we recommend washing with mild soap.

Just rub the gloves together under running water (like washing hands), and then let them dry at room temperature.

In this way, the leather will regain its original flexibility (this is one of the characteristics of a quality leather glove).

Characteristics:

- Brown split leather glove
- Lining of cotton to the palm
- Elastic at the wrist
- Made in Canada
- 11 cm (4 1/4") split leather cuff
- Hot parts handling
- Good dexterity

Available sizes: L and XL
