European homologation

No fiberglass. Excellent comfort and excellent dexterity. The split, very resistant to abrasion and puncture, offers an excellent handling of dry or lightly oily parts.

Cleaning: The split leather of this glove absorbs water. By cons, this type of leather is highly resistant to abrasion. This is why it is used for hard work. For cleaning we recommend washing with mild soap. Just rub the gloves together under running water (like washing hands), and then let them dry at room temperature. In this way, the leather will regain its original flexibility (this is one of the characteristics of a quality leather glove).

- ❖ Thin and precise handling of sharp parts with an excellent dexterity
- ❖ Metal industry
- ❖ Automotive industry
