European homologation

The ProtecPlus / M glove combines both the advantages of knitted glove and bovine split leather. The anti-cut level 5 knitted glove offers excellent comfort and excellent dexterity. The split leather, highly resistant to abrasion and puncture, allows an excellent grip in dry or slightly oily environments. The tabs provide protection on fingertips. The cotton cuff fabric provides both protection against microcuts and dirt.

Cleaning : The split leather of this glove absorbs water. By cons, this type of leather is highly resistant to abrasion. This is why it is used for hard work. For cleaning we recommend washing with mild soap. Just rub the gloves together under running water (like washing hands), and then let them dry at room temperature. In this way, the leather will regain its original flexibility (this is one of the characteristics of a quality leather glove).

- ❖ Provides protection against mechanical hazards
- ❖ High cut resistance
- ❖ Handling of sharp parts with very good dexterity
- ❖ Metal industry
- ❖ Automotive industry

Sizes 9, 10 and 11

HEAD OFFICE - PLANT
