

In the field of personal protective equipment (PPE), the work gloves offered by BCL help improve the health and safety check of users, while increasing their productivity.

OUR MISSION: "Help make organizations more productive by protecting and optimizing the use of hands for their workers."

Since 1964

TIG and MIG-MAG Welding Glove Model SB14

Split leather

Designed for:

- ❖ Welding
- ❖ Shop work

This welding glove is made entirely of very supple split leather, offering great comfort and protection against heat up the forearm with its cotton lining.

Outside seams are protected by a ridge of leather.

For welding or handling hot parts, this is the right choice.

Although it is among the most appreciated by workers such as welders in the workshop, some use it for barbecues and others to work at the sugar shack.

Maintenance:

The split leather of this glove absorbs water. By cons, this type of leather is highly resistant to abrasion. This is why it is used for hard work. For cleaning we recommend washing with mild soap.

Just rub the gloves together under running water (like washing hands), and then let them dry at room temperature.

In this way, the leather will regain its original flexibility (this is one of the characteristics of a quality leather glove).

Characteristics:

- Split leather
- Full cotton lining
- Protected seams
- 35 cm (14 inches) long glove
- Rust coloured
- Heat resistance
- Suppleness

Available size: L
